ISDN Solutions

KRONE ISDN products

The KRONE ISDN product range enables ISDN services to be delivered to the desktop via traditional point to point wiring or structured cabling in a flexible, cost effective manner.

Very often companies set up a dedicated and fixed ISDN outlet which becomes a problem in today's business environment where more than one user needs access to the vast array of services that ISDN provides.

The new 19" ISDN Patch Panel 3/24 enables you to patch up to 3 Basic Rate ISDN services into your structured cabling system which will provide up to 24 users with ISDN services to their desk.

The 10" ISDN Patch Panel 1/8 for smaller structured cabling systems, installed in the MiniLAN, enables you to patch one basic Rate ISDN service to 8 users. For smaller solutions the 4 way ISDN Breakout Box is ideally suited for use in structured wiring systems and allows a single ISDN service to be distributed to up to 4 users.

24 Port ISDN Patch Panel

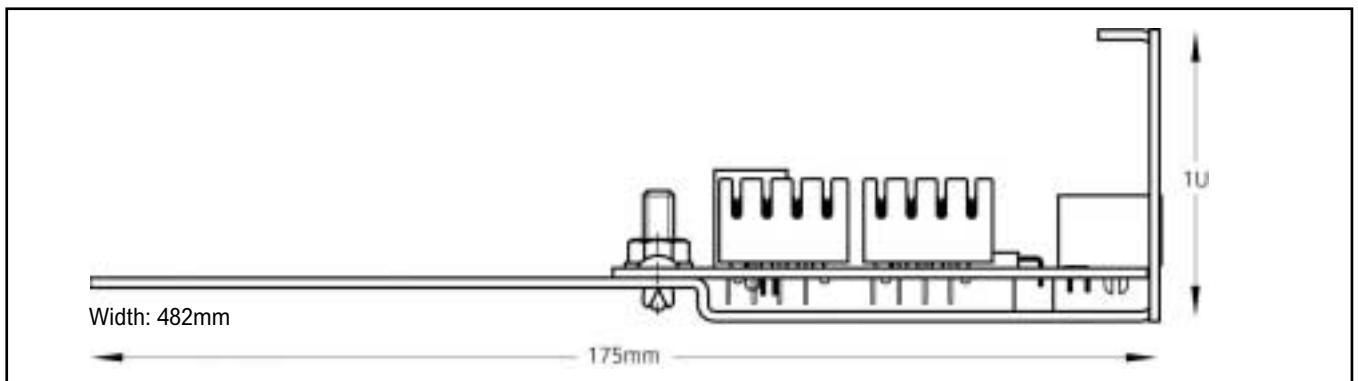

The 24 port ISDN Patch panel allows the ISDN service to be distributed to several outlets by patching over a structured cabling system. It dispenses with the need for dedicated ISDN Outlets or ISDN Terminating Adapters as the ISDN Patch Panel itself has necessary S-BUS termination.

Features

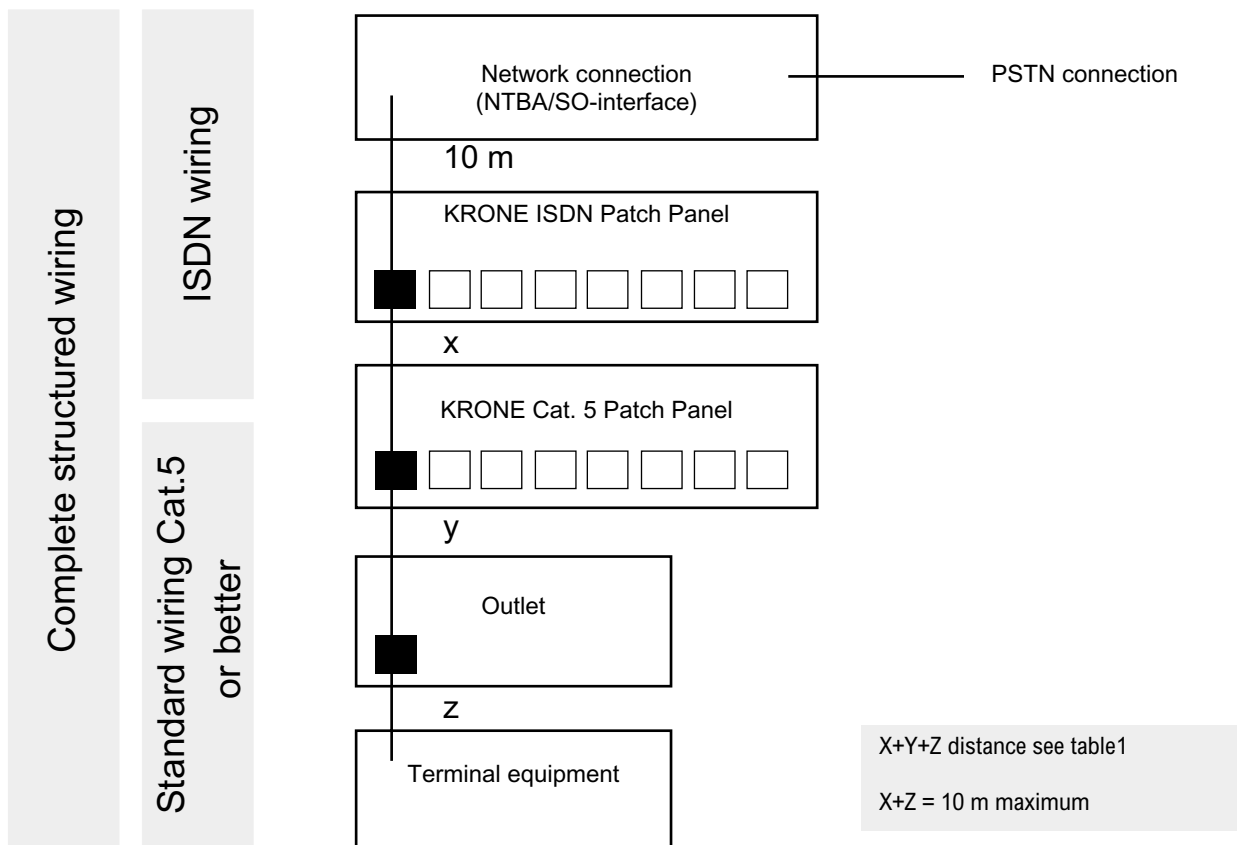

- Utilizes your existing structured cabling system for ISDN as well as other services
- No need for dedicated ISDN cabling
- 1 ISDN line connects up to 8 ISDN users or devices
- Accommodates up to 3 ISDN inputs
- Provides portability for video conferencing facilities between offices
- RJ45-socket input or twisted pair

Dimensions:

Wiring Details

**Table 1**

The sum of the cable length per S_0 -Bus max. 420 m. The maximum cable-length per port on the ISDN-Patch Panel depends on the connected ports:

Used Ports	Max. length per port
1-4	100m
5	80m
6	70m
7	60m
8	50m

Notice:

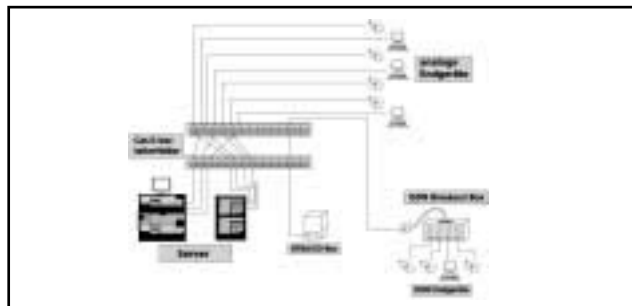

The above-mentioned lengths include a maximum length of 10 m for the patch cord between ISDN Patch Panel und the Network connection with Cat. 5 cables or better.

The mentioned length may deviate depending on the installed active ISDN components.

4 Way ISDN Breakout Box

The 4 Way ISDN Breakout Box is ideally suited for use in structured wiring systems and allows a single ISDN service to be distributed to up to 4 users

- Expands single point to point ISDN services to 4 access points
- Portable - allows installation to be moved around
- Provides multiple access in fixed wiring installation
- A cost effective way of increasing access
